PipPal

UI / UX Design Specification

Trading Journal Mobile Application

iOS & Android · Flutter / Dart · Version 1.0

Document prepared for: UI/UX Designer

This document provides complete screen-by-screen design direction, component specifications, colour tokens, typography, spacing, animation guidelines, and design system requirements for PipPal.

1. Project Overview & Design Philosophy

1.1 What Is PipPal?

PipPal is a digital trading journal for Forex, Crypto, and Stock traders that helps them log trades manually, visualize their performance through calendar and dashboard views, and build stronger trading discipline over time. It is built in Flutter/Dart and targets iOS and Android as a primary-mobile-first product.

1.2 Design Philosophy

PipPal's visual language is built on two reference pillars blended intentionally:

Reference	What We Borrow	Emphasis
TraderSync	Data density, metric card layout, P&L calendar cells, performance report structure, trade log table rows	Secondary — data patterns only
Notion	Warm off-white backgrounds, soft card borders, generous whitespace, clean sans-serif typography, muted colour palette, minimal chrome, card elevation through soft border not hard shadow	Primary — dominant aesthetic

> **DESIGN DIRECTION** The result should feel like a beautifully organised Notion workspace that has been purpose-built to track trades. Clean, warm, structured — but with meaningful data visualisation where it counts.

1.3 Personality & Tone

The app should sit at a deliberate balance point (5 out of 10) between professional seriousness and approachable playfulness. It is not a Bloomberg terminal (cold, dense, intimidating) and it is not a gaming app (loud, gamified, distracting). Think: the feeling of opening a well-designed personal notebook that takes your work seriously but does not take itself too seriously.

1.4 Core Design Principles

- Clarity first — every screen should communicate its primary purpose in under 3 seconds of viewing
- Warm, not cold — cream/off-white backgrounds and muted colours over stark white and neon contrasts
- Data without overwhelm — surface key metrics prominently; nest secondary data in progressive disclosure
- Consistent rhythm — spacing, type scale, and card structure should feel unified across all screens
- Trust through typography — clean, legible numbers are the single most critical UI element in a trading journal
- Accessible for everyone — design for beginners first; experienced traders will find depth naturally

2. Design References & Inspiration

2.1 Primary Reference Apps

App / Source	Reference URL / Location	What to Study
TraderSync (mobile)	App Store / Google Play	Calendar colour-coded cells, trade log list rows, metric summary cards, P&L report layout
TradeZella	tradezella.com	Modern card-based dashboard, clean chart style, colour usage in metric cards
Notion (app)	notion.com / mobile app	Background warmth, card border style, sidebar spacing, typography hierarchy, empty state illustration style
Tradewire (Behance)	behance.net/gallery/102904929	Full trading journal UI/UX case study and design system — review entire Behance project

2.2 Dribbble Design References

Search the following terms on dribbble.com and review the top shots for visual inspiration:

- 'Trading journal app UI' — filter: mobile, past year
- 'Finance dashboard mobile' — look for clean card layouts
- 'Trading app dark mode' — reference for dark mode tokens
- 'Calendar heatmap finance' — reference for the P&L calendar view
- 'Bottom navigation bar flutter' — animated nav bar references
- 'Trading App UI UX — TradeWize' by Dribbble user (Sep 2024) — clean fintech mobile design
- 'Stock Trading App' by Ronas IT — financial card layout patterns

2.3 Behance Case Studies

- Tradewire — Trading Journal App (UX/UI, Design System) — full screen flow + design system reference
- Search 'Fintech App Case Study' — review top 5 results for current 2024/25 patterns
- 'UI/UX Case Study for a Fintech App (Union Bank)' by Mar Motas — interaction patterns

2.4 Key UI Patterns to Reference

Pattern	Reference App	Application in PipPal
P&L Calendar Heatmap	TraderSync, GitHub-style contribution graph	Monthly calendar with green/red cell backgrounds showing daily P&L
Metric Summary Cards	TraderSync, Robinhood	Win rate, total pips, RR ratio — top dashboard cards
Bottom Sheet Entry Form	Airbnb, Uber, Wealthsimple	Slide-up modal for quick trade entry
Equity Curve Line Chart	Coinbase, TradeZella	Progressive line drawing animation, fill below line
Warm Card Surfaces	Notion, Linear	Cards with soft 1px border on warm background, no hard shadows
Onboarding Walkthrough	Duolingo, Revolut	3-step swipeable feature intro with illustrations

3. Colour System

> **IMPORTANT** All hex values below represent the design's Light Mode tokens. Section 10 maps these to their Dark Mode equivalents. Always design in Light Mode first, then specify the Dark Mode palette.

3.1 Primary Brand Palette (Client-Selected)

The following five colours were selected by the product owner and form the brand identity core:

	#2D2D2A	Charcoal Black	*Primary text, app bars, dark UI elements*	Text Primary
	#4C4C47	Warm Gray	*Secondary text, inactive states, meta information*	Text Secondary
	#848FA5	Slate Blue-Gray	*Interactive elements, active nav, links, badges, muted headings*	Brand Accent / Interactive
	#C14953	Crimson Red	*Loss indicator, brand highlight, primary CTA, alert states*	Loss / Brand Accent
	#E5DCC5	Warm Cream	*Card surfaces, secondary backgrounds, tag backgrounds*	Surface Secondary

3.2 Recommended Additions (Designer Proposed)

These colours are proposed additions to complete the system. The designer is encouraged to validate and refine these tones:

Swatch	Hex	Name	Usage	Token Role
	#F5F1E8	App Background (Off-White)	*Root background of all screens — lighter, warmer than cream*	Background Primary
	#FFFFFF	Pure White	*Card surfaces, input field backgrounds, modal backgrounds*	Surface Primary
	#2A9D5C	Profit Emerald	*Positive P&L, winning trade indicators, success states*	Profit / Success
	#D4854A	Warm Amber	*Warning states, neutral alerts, pending tags*	Warning / Neutral Alert
	#E0D9C5	Warm Border	*Card borders, dividers, separator lines in light mode*	Border / Divider

3.3 Semantic Colour Tokens — Light Mode

These are the named design tokens the developer will reference in Flutter code. The designer must use these roles consistently:

Token Name	Hex Value	Usage Rule
colorBackground	#F5F1E8 (Off-White)	Root screen background — all scrollable areas
colorSurface	#FFFFFF (White)	Cards, modals, bottom sheets, input fields
colorSurface2	#E5DCC5 (Cream)	Tag chips, secondary card areas, highlighted sections
colorTextPrimary	#2D2D2A (Charcoal)	All primary body text, headings, metric figures
colorTextSecondary	#4C4C47 (Warm Gray)	Subtitles, meta text, secondary labels, placeholders
colorTextMuted	#848FA5 (Slate)	Timestamps, helper text, inactive icons, captions
colorAccent	#848FA5 (Slate)	Active nav icons, links, focus rings, selected states
colorBrandCrimson	#C14953 (Crimson)	Loss values, primary CTA button, brand highlights, error

Token Name	Hex Value	Usage Rule
colorProfit	#2A9D5C (Emerald)	Profit values, winning trade tag, positive change arrows
colorWarning	#D4854A (Amber)	Warning banners, neutral/pending tags, break-even labels
colorBorder	#E0D9C5 (Warm Border)	All card borders and dividers in light mode
colorNavBar	#FFFFFF (White)	Bottom nav bar background

3.4 P&L Colour Usage Rules

- Profit / Positive P&L — always use #2A9D5C (Emerald) for text, and a 10% opacity emerald tint for card backgrounds
- Loss / Negative P&L — always use #C14953 (Crimson) for text, and a 10% opacity crimson tint for card backgrounds
- Break-even (0.00) — use #D4854A (Amber) to distinguish from both states
- User-customisable — the profit/loss colours are overridable from Settings. The token names stay the same; only the hex values change per user preference
- Calendar cells — profit cells: emerald fill at 25% opacity with emerald text. Loss cells: crimson fill at 25% opacity with crimson text. No trades: cream (#E5DCC5)

> **COLOUR PSYCHOLOGY NOTE** The warm off-white (#F5F1E8) background was chosen deliberately over pure white. Research shows traders spend extended periods looking at screens; warm backgrounds reduce eye strain compared to stark white. Notion adopted this same approach for identical reasons.

4. Typography System

4.1 Font Family

Role	Font	Why
Primary UI Font	Inter (Google Fonts)	Clean, modern, high legibility across all sizes. Used by Notion, Linear, Vercel. Excellent digit rendering.
Numeric / Data Display	Inter (tabular-nums variant)	Enable 'fontFeatures: [FontFeature.tabularFigures()]' in Flutter — ensures all digits occupy equal width, critical for aligned financial figures in tables and metrics
Fallback (System)	SF Pro (iOS) / Roboto (Android)	Flutter renders system fonts as fallback. Design in Inter; the system fallback will mirror it closely.

4.2 Type Scale

Token	Size (px)	Weight	Line Height	Usage
displayLarge	32px	Bold (700)	38px	Hero numbers — total equity, key P&L figure on dashboard
displayMedium	26px	SemiBold (600)	32px	Section hero metrics — win rate %, total pips
headlineLarge	22px	SemiBold (600)	28px	Screen titles in AppBar
headlineMedium	20px	SemiBold (600)	26px	Card section headers
headlineSmall	18px	Medium (500)	24px	Sub-section labels, modal titles
titleMedium	16px	Medium (500)	22px	Card titles, trade pair names, list item primaries
bodyLarge	15px	Regular (400)	22px	Primary body text, form field values, notes
bodyMedium	14px	Regular (400)	20px	Secondary body text, descriptions
bodySmall	13px	Regular (400)	18px	Helper text, form labels, meta info
labelLarge	12px	Medium (500)	16px	Tags, badges, chips, nav bar labels

Token	Size (px)	Weight	Line Height	Usage
labelSmall	11px	Regular (400)	14px	Timestamps, calendar day labels, footnotes

4.3 Typography Rules

- NEVER use bold below bodySmall (13px) — it becomes illegible on small mobile displays
- All numeric financial values (P&L, pips, percentages, RR ratios) must use tabular figure rendering
- Headings use Charcoal (#2D2D2A); secondary labels use Warm Gray (#4C4C47); meta text uses Slate (#848FA5)
- Line heights must be set explicitly — never rely on defaults for financial data tables
- Maximum line length in descriptive text: 60 characters (roughly 300px at 14px) — prevents overly long text lines
- Number alignment in tables and metric rows: always right-align or centre-align; never left-align

5. Spacing & Layout System

5.1 Base Spacing Unit

All spacing values are multiples of 4px. This ensures consistent rhythm across all screen sizes and aligns with Flutter's Material 3 spacing conventions.

Token	Value	Usage
spacing2	2px	Icon-to-text gap, micro adjustments
spacing4	4px (XS)	Inline element spacing, tag internal padding
spacing8	8px (S)	Component internal padding (dense), icon spacing
spacing12	12px (SM)	List item internal spacing, tight card padding
spacing16	16px (M)	Standard card padding, section body padding, form field height
spacing20	20px (ML)	Button padding (vertical), modal padding top/bottom
spacing24	24px (L)	Card padding (standard), section spacing, bottom sheet handle area
spacing32	32px (XL)	Screen horizontal padding, header spacing
spacing40	40px (2XL)	Section gap between major page blocks
spacing48	48px (3XL)	Bottom nav bar clearance, hero section spacing
spacing64	64px (4XL)	Top-of-screen hero area, large visual separators

5.2 Screen Layout Rules

- Horizontal screen padding: 16px (spacing16) on both sides — applies to all content areas
- Safe area: Respect iOS safe areas (notch top, home indicator bottom). Bottom nav must sit above home indicator
- Card border radius: 12px (cards), 8px (chips/tags), 16px (bottom sheet), 24px (modal dialogs)
- Card border: 1px solid #E0D9C5 (Warm Border) — no drop shadows in light mode; shadow only in modals/bottom sheets
- Card shadow (modals/bottom sheets only): 0px 4px 24px rgba(0,0,0,0.08) — very soft, warm-tinted
- Minimum touch target size: 44×44pt (iOS HIG), 48×48dp (Material) — whichever is larger
- Bottom navigation bar height: 56dp + safe area inset
- Top app bar height: 56dp + safe area inset (status bar)

5.3 Grid System

- Dashboard uses a 2-column card grid for metric summary cards (each card = 50% width minus gap)
- Card gutter: 12px between all cards in grid
- Calendar uses a 7-column grid (days of week), equal column widths
- Trade log uses a full-width single column with internal table structure

6. Component Library Specifications

The designer must produce all components below in a dedicated Components page in Figma. Each component must show: Default, Hover/Pressed, Focused, Disabled, and where applicable: Empty, Loading, and Error states.

6.1 Buttons

Component	Style	Usage	Notes
Primary Button	Filled, Crimson bg (#C14953), white text, 12px radius, 48dp height, full-width or auto	Main CTAs: 'Log Trade', 'Save', 'Continue', 'Sign Up'	Pressed: darken bg by 10%. Disabled: 40% opacity.
Secondary Button	Outlined, Crimson border, Crimson text, white bg, 12px radius, 48dp height	Secondary actions: 'Cancel', 'Skip', 'Edit'	Pressed: Crimson bg at 8% opacity.
Ghost Button	No border, no bg, Slate (#848FA5) text	Tertiary: 'Forgot password', 'Learn more', inline text actions	Pressed: Slate bg at 8% opacity.
Destructive Button	Filled deep red (#9B2226), white text	Delete trade, remove account — always in a confirmation dialog	Must always be paired with a Cancel button.
Icon Button	40×40dp circle, Charcoal icon on transparent bg, with Cream (#E5DCC5) bg on hover/press	Filter, edit, share, close actions	Icon size: 20dp inside 40dp container.
FAB (Add Trade)	56×56dp or pill shape, Crimson bg, white + icon, floating above nav bar	Central add-trade action — always visible	Spring animation on tap. Shadow: 0px 4px 16px rgba(193,73,83,0.30).

6.2 Input Fields

Component	Default State	Focused State	Notes
Text Input	White bg, 1px Warm Border, 12px radius, 48dp height, bodyMedium text, labelSmall floating label	1.5px Slate (#848FA5) border, label rises and shrinks (animated float)	Error state: Crimson border + error message below.
Number Input	Same as text + right-aligned value text, tabular font feature	Same focus style + numeric keyboard trigger on mobile	Always show 2 decimal places for prices; 1 for pips.

Component	Default State	Focused State	Notes
Dropdown / Picker	White bg, 1px border, chevron right icon, bodyMedium label	Triggers bottom sheet picker overlay on tap	Never use system default picker — custom bottom sheet.
Date & Time Picker	White bg, calendar icon on right, formatted date string	Triggers calendar bottom sheet picker	Show day, month, year + time (HH:MM) formatted for user's locale.
Toggle / Switch	iOS-style toggle: Warm Border track, white thumb when off	Crimson track, white thumb when on	Follow iOS HIG toggle styling.
Textarea (Notes)	White bg, 1px border, min 100dp height, grows with content	Slate border on focus	Used for trade notes/commentary. Show character count.
Search Bar	Off-white bg, 12px radius, search icon left, clear icon right	White bg, Slate border, keyboard opens immediately	Used on Journal screen to search trades.

6.3 Cards & Containers

Component	Description	Dimensions	States
Metric Summary Card	2-col grid card. Top: label (labelSmall, Slate), bottom: value (displayMedium, Charcoal), bottom-right: trend arrow + percent change	~(screen/2 - 20dp) × 88dp	Loading: Shimmer skeleton. Empty: dash placeholder.
Trade List Card	Full-width. Left: instrument pair + trade type tag. Centre: entry price → exit price. Right: P&L value (coloured) + pips. Bottom row: date, duration, RR ratio	Full-width × 80dp	Swipe-right: Edit. Swipe-left: Delete (destructive red).
Calendar Day Cell	Square cell in 7-col grid. Day number (labelSmall), P&L value (labelSmall, coloured). Background filled based on profit/loss	Equal width × 52dp tall	No trades: cream bg. Profit: emerald tint. Loss: crimson tint. Selected: Slate border ring.
Section Header Card	Full-width. Title left (headlineMedium), action right (labelLarge, Slate link)	Full-width × 44dp	Simple text row — no background or border.
Chart Card	Full-width card with title, subtitle (date range), and embedded chart. Padding inside card.	Full-width × height depends on chart type	Loading: skeleton placeholder rectangle. Empty: empty state illustration.

Component	Description	Dimensions	States
Tag / Chip	Small pill. 6px radius. Filled or outlined. Buy: Emerald bg tint. Sell: Crimson bg tint. Neutral: Cream	Auto-width × 24dp	Tappable chips allow filter selection — add checkmark icon when selected.

6.4 Navigation Components

- Bottom Navigation Bar: 4 tabs — Dashboard, Journal, Calendar, Analytics. Icons: outlined when inactive, filled when active. Active colour: Crimson (#C14953) icon + Crimson label. Inactive: Slate (#848FA5). White background. 1px top border in Warm Border.
- Floating Action Button (FAB): Positioned above centre of bottom nav bar at the top edge. Crimson filled. Plus icon + 'Log Trade' label. Expands to mini bottom sheet on tap.
- App Bar (Top): White background, Charcoal title (headlineLarge), back-arrow left (when applicable), profile avatar or settings icon right. No elevation — just bottom border (Warm Border).
- Bottom Sheet Handle: Grey rounded pill 36×4dp centred at the top of all bottom sheets. 8dp margin above handle.

6.5 Feedback & Status Components

Component	Appearance	Usage
Toast / Snackbar	Full-width bottom-anchored bar, 12px radius, Charcoal bg, white text, optional action link in Crimson. 48dp height.	Trade saved, sync complete, error notifications
Dialog / Alert	Centre modal on overlay. White bg, 16px radius, Charcoal title, bodyMedium message, 2 buttons (Cancel + Primary)	Destructive confirmations, critical warnings
Skeleton / Loading	Animated shimmer effect (warm gray #D4CDB9 on off-white). Replaces exact card shapes.	All data cards while loading. Never show spinners alone.
Empty State	Illustration (custom, matches brand), 1-2 line message in bodyMedium (Warm Gray), optional CTA button below	First time use, no trades logged, empty calendar
Success State	Full-screen checkmark animation (Lottie) + message. Emerald colour. Auto-dismisses after 1.5s	After trade saved, after sign-up completed
Error Banner	Full-width inline red banner below input, labelSmall Crimson text + warning icon left	Form validation errors, API errors

7. Navigation Structure

7.1 App Navigation Map

Level	Screen	Access Method	Back Behaviour
Root (L0)	Splash Screen	App launch only — auto-advances after 2.5s	N/A
Auth (L0)	Welcome / Sign In / Sign Up / Profile Setup	First-time users only (skipped if logged in)	Back allowed between auth screens; not to Splash
Nav Tab 1	Dashboard	Bottom nav tab 1 (Home icon)	Tab switch resets scroll position
Nav Tab 2	Journal / Trade Log	Bottom nav tab 2 (List icon)	Tab switch preserves last scroll
Nav Tab 3	Calendar	Bottom nav tab 3 (Calendar icon)	Tab switch preserves month selection
Nav Tab 4	Analytics / Stats	Bottom nav tab 4 (Chart icon)	Tab switch preserves filter state
Modal (L1)	Log Trade Bottom Sheet	FAB button (+ icon floating above nav)	Swipe down or Cancel button closes it
Push (L1)	Trade Detail Screen	Tap any trade in Journal or Calendar	Back button or swipe-right to go back
Push (L1)	Settings Screen	Tap gear icon in app bar (Dashboard)	Back arrow to Dashboard
Push (L2)	Settings sub-screens (Display, Notifications, Account)	Tap setting row	Back arrow to Settings main
Push (L1)	Profile Screen	Tap avatar in Dashboard app bar	Back arrow to Dashboard

7.2 Bottom Navigation Bar Design

- 4 tabs only: Dashboard, Journal, Calendar, Analytics
- Icons: use Lucide icons or custom line icons (2px stroke weight). Active state: filled variant of same icon
- Labels: always visible (not icon-only). labelSmall (11px) below each icon
- Active indicator: Crimson icon + Crimson label + optional small dot or pill indicator above active icon
- Tab switch animation: Material 3 Fade-Through (cross-fade, not slide). Duration: 200ms
- Haptic feedback: Light haptic on each tab tap (iOS: UIImpactFeedbackGenerator.light)

8. Screen-by-Screen Design Specifications

> **DESIGNER NOTE** For each screen below: design at 390×844pt (iPhone 14 base size). Also produce 375×667pt (iPhone SE) and 428×926pt (iPhone 14 Pro Max) as stretch variants. Flutter will adapt intermediate sizes automatically.

Screen 1 — Splash Screen

Property	Specification
Purpose	Brand intro on app cold launch. Creates first impressions. Auto-advances after animation.
Background	#F5F1E8 (Off-White) — full screen, no status bar content
Content — Centre	PipPal logo/icon centred vertically and horizontally. The candlestick character hugging a notebook (final logo asset from brand process).
Content — Below Logo	'PipPal' wordmark in displayLarge (32px, Bold, Charcoal). Tagline below: 'Your Trading, Journalled.' in bodyMedium (14px, Italic, Warm Gray).
Content — Bottom	Subtle 'Powered by PipPal' or version number in labelSmall (Slate). Bottom-safe-area position.
Animation Sequence	1) App launches — background fades in from white over 300ms. 2) Logo icon pops in with spring animation (scale 0 → 1.05 → 1.0, duration 500ms). 3) Wordmark fades up from 0→1 opacity, 200ms delay, 300ms duration. 4) After 1800ms total: fade-out entire screen → transition to Welcome or Dashboard.
States	Single state only. No user interaction.
Flutter Notes	Show status bar with light content (white icons). Use AnnotatedRegion<SystemUiOverlayStyle>.

Screen 2 — Welcome Screen

Property	Specification
Purpose	Entry point for unauthenticated users. Sets the tone. Drives sign-up or sign-in.
Background	#F5F1E8 (Off-White)
Top Section (40% screen)	Large illustration or stylised visual — candlestick character with a journal, showing excitement/confidence. Warm tones matching palette. Not a photo — custom illustration or vector graphic.
Hero Text	headlineLarge (22px, SemiBold): 'Journal every trade. Trade every insight.' — centred. Below: bodyMedium (14px, Warm Gray): 'PipPal helps Forex traders track performance and improve decisions, one trade at a time.'

Property	Specification
CTA Buttons	Primary: 'Create free account' (Crimson, full-width). Secondary: 'Sign in' (outlined Crimson, full-width, 12px below Primary). Both 48dp height. 24px horizontal margin.
Bottom Trust Line	labelSmall (Slate): 'No broker connection required. 100% manual journalling.' Centred. Positioned above system home indicator.
States	Single state. No loading. Buttons disabled until tap action.

Screen 3 — Sign Up Screen

Property	Specification
Purpose	New user account creation. Minimal friction — 3 fields maximum.
Layout	Scrollable screen. Top: PipPal wordmark (small, top-left). Back arrow top-left to return to Welcome.
Screen Title	headlineLarge: 'Create your account'. Subtitle bodyMedium (Warm Gray): 'Start journalling in seconds.'
Form Fields	1) Full Name — Text Input. 2) Email Address — Email Input (email keyboard). 3) Password — Text Input with show/hide toggle eye icon right. All 48dp height. 16px gap between fields.
Password Strength	Below password field: 4-dot strength indicator (grey → red → amber → green). Updates live as user types. labelSmall feedback text.
CTA	Primary 'Create Account' button — full width, 48dp, Crimson. Disabled until all fields valid.
Legal	labelSmall (Slate) below button: 'By signing up, you agree to our Terms of Service and Privacy Policy.' Terms and Privacy as Slate underline links.
Sign In Link	Bottom: bodySmall 'Already have an account? Sign in' — 'Sign in' in Crimson bold.
States	Default, Active (typing), Loading (submitting — button shows spinner), Success (navigates to Onboarding), Error (inline field errors in Crimson)

Screen 4 — Sign In Screen

Property	Specification
Layout	Mirror Sign Up layout. Two fields: Email + Password. Show/hide toggle on password.
Screen Title	headlineLarge: 'Welcome back'. Subtitle: 'Sign in to continue journalling.'
Forgot Password	Ghost button link below password field, right-aligned. 'Forgot password?' in Slate.
CTA	Primary 'Sign In' — full width, 48dp, Crimson. Loading state on submit.
Sign Up Link	Bottom: 'New to PipPal? Create account' — 'Create account' in Crimson bold.
Error State	Wrong credentials: red banner below CTA button: 'Incorrect email or password. Try again.' — do NOT highlight specific fields to avoid revealing which is wrong.

Screen 5 — Onboarding Walkthrough (3 Slides)

Property	Specification
Purpose	Shown once after sign-up. Introduces 3 core features. Swipeable. Skippable.
Layout	Full screen. Illustration top 50%. Text bottom 50%. Page indicator dots below illustration. Skip link top-right (Ghost button, Slate).
Slide 1 — Log Trades	Illustration: simple trade entry form animation. Title: 'Log every trade in seconds' (headlineLarge). Body: 'Quickly record entry, exit, lot size, instrument, and your notes — all in one tap.' (bodyMedium, Warm Gray)
Slide 2 — See Your Calendar	Illustration: colourful calendar with green/red cells. Title: 'See your performance at a glance'. Body: 'Your P&L calendar shows winning and losing days with a visual colour map.'
Slide 3 — Track & Improve	Illustration: equity curve rising. Title: 'Understand your edge'. Body: 'Dashboard metrics show win rate, risk-reward ratio, and trade frequency to help you trade smarter.'
Navigation	Swipe left/right to advance slides. Page indicator dots below illustration (3 dots). Dot: inactive=Warm Border; active=Crimson.
CTA	Last slide: 'Get started' Primary button (Crimson, full-width). First two slides: 'Next' Primary. 'Skip' Ghost button throughout (top-right).
Animation	Slides transition with a horizontal spring slide. Each illustration has a subtle entrance animation (scale-in from 0.95→1.0 as slide enters).

Screen 6 — Profile Setup Screen

Property	Specification
Purpose	Shown once after onboarding walkthrough. Personalises the experience. Optional but encouraged.
Screen Title	headlineLarge: 'Set up your profile'. Subtitle: 'We will personalise your experience.'
Fields	1) Trading Name / Display Name (pre-filled with sign-up name, editable). 2) Preferred Currency — Dropdown (USD, EUR, GBP, JPY, etc., set to USD by default). 3) Time Zone — Dropdown (auto-detected from device, editable). 4) Account Type — Segmented control: Demo / Real. 5) Trading Style — Optional multi-select chips: Scalping, Day Trading, Swing Trading, Position Trading.
Avatar	At top: circular avatar placeholder (64×64dp). User can tap to upload from gallery or camera. Show initials fallback if no image.
CTA	Primary 'Save & Start Journalling' — full width, Crimson. Below: Ghost 'Skip for now' link.
Transition	After saving: Navigate to Dashboard with a slide-from-right transition. First time on Dashboard: show a brief 'Welcome, [Name]!' toast notification.

Screen 7 — Dashboard (Home Tab)

Property	Specification
Purpose	Primary screen. Shows performance summary, recent activity, and quick-access to core features.
App Bar	White bg. Left: 'PipPal' wordmark (titleMedium, Charcoal). Right: profile avatar (40×40dp circle) — tappable → Profile Screen. Below app bar: date range filter chip row.
Date Range Filter	Horizontal scrollable chip row: 'Today' | 'This Week' | 'This Month' | 'All Time' | 'Custom'. Active chip: Crimson bg tint with Crimson text. Inactive: Cream bg. All 32dp height, 8px radius, 12px horizontal padding.
Equity Curve Chart Card	Full-width card. Title: 'Equity Curve' (headlineSmall). Subtitle: current period label. Chart: smooth line chart with area fill below (emerald fill when positive, crimson fill when negative). X-axis: dates. Y-axis: account balance or cumulative pips. Chart height: 160dp. Interaction: tap+drag shows cross-hair with value tooltip.
Metric Cards Grid (2-col)	Four metric cards in a 2×2 grid (with 12px gutters). Each card: background White, 12px radius, Warm Border 1px. Label top (labelSmall, Slate). Value centre (displayMedium, Charcoal). Trend row bottom: small arrow icon + % change since last period (emerald=up, crimson=down). Cards: Total Pips | Win Rate (%) | Avg RR Ratio | Total Trades
Recent Trades Section	Section header: 'Recent Trades' left + 'See all' link right (Slate, labelLarge). Below: 3–5 most recent Trade List Cards. Empty state: illustration + 'No trades yet. Log your first trade!' + 'Log Trade' Primary button.
FAB	Crimson, 56×56dp, + icon. Fixed position: 16dp from right edge, 16dp above bottom nav bar top. Spring animation: taps expand to show 'Log Trade' label pill. Tapping navigates to Log Trade Bottom Sheet.
Scroll Behaviour	App bar stays fixed. FAB stays fixed. Entire content area below app bar is scrollable. FAB disappears with a fade when user scrolls down (to reduce obstruction), reappears on scroll up.
Loading State	All cards show shimmer skeleton placeholders. Stagger: equity chart skeleton first (200ms delay), then metric cards (50ms stagger each), then trade list skeletons.
Empty State (No Trades Ever)	Replace equity chart and metric cards with large empty state illustration. CTA: 'Log your first trade' Primary button centred.

Screen 8 — Log Trade Bottom Sheet (Step 1 of 2)

Property	Specification
Trigger	FAB on Dashboard, or '+' action from Journal screen. Slides up as bottom sheet.
Sheet Height	Expands to 85% of screen height. Remaining 15% shows dimmed overlay of screen behind (tap overlay to dismiss).

Property	Specification
Handle	36×4dp grey pill at very top, centred, 8dp margin below. Swipe down on handle or overlay tap dismisses with spring animation.
Step Indicator	2-step indicator: Step 1 of 2 shown as small pill '1 / 2' at top-right, or progress dots. Step label: 'Trade Details'.
Sheet Title	headlineSmall: 'Log a Trade'. Subtitle: bodySmall (Slate) 'Step 1: Trade details'.
Fields — Step 1	1) Instrument / Pair — Text input with autocomplete (EUR/USD, GBP/USD, XAU/USD etc.). 2) Trade Type — Segmented control: BUY / SELL (BUY = Emerald active, SELL = Crimson active). 3) Entry Price — Number input. 4) Exit Price — Number input. 5) Lot Size — Number input. 6) Open Date & Time — Date-time picker. 7) Close Date & Time — Date-time picker.
Auto-Calculations (Live)	Below the price fields: show auto-calculated P&L in pips and currency (coloured), and RR ratio if SL/TP added. Update live as user types. Small info row with icons: e.g., '📈 +48 pips | $96.00 | RR 1:2'
CTA	Full-width Primary: 'Next: Add notes & tags →' (Crimson). Disabled until required fields are filled. Keyboard avoidance: sheet scrolls/adjusts so active input is always visible above keyboard.

Screen 8B — Log Trade Bottom Sheet (Step 2 of 2)

Property	Specification
Same sheet, slides content horizontally to reveal Step 2 (or transitions in-place).	
Step Header	headlineSmall: 'Log a Trade'. Subtitle: bodySmall 'Step 2: Notes & details'.
Fields — Step 2	1) Notes / Commentary — Textarea (min 80dp, grows). Placeholder: 'What happened? Why did you take this trade?' 2) Emotional State — Optional emoji picker row: 😊 Confident | 😐 Neutral | 😰 Anxious | 😤 Frustrated | 🎯 Focused (tap to select, single choice). 3) Trade Setup Tag — Optional chip multi-select (user-defined tags appear here; pre-loaded with: Trend Following, Breakout, Reversal, News, Scalp). 4) Screenshot / Photo — Optional. Tap 'Add screenshot' to open camera/gallery. Shows small thumbnail if added.
Back / CTA	'← Back' Ghost link left. 'Save Trade' Primary button right (or full-width). On Save: sheet animates downward, Success state (green checkmark toast), trade appears in Journal.
Dismiss Confirmation	If user swipes down mid-entry (fields have values): show small confirmation dialog: 'Discard this trade?' with 'Discard' (destructive) and 'Keep editing' options.

Screen 9 — Trade Detail Screen

Property	Specification
Access	Tap any trade card in Journal or Calendar day. Pushes as new screen (slides from right).
App Bar	Back arrow left. Title: instrument pair (e.g., 'EUR/USD') in headlineLarge. Right: Edit icon (pencil) + More (ellipsis) dropdown with options: Edit, Share, Delete.
Hero P&L Block	Large centred block at top (below app bar). P&L in displayLarge (emerald if profit, crimson if loss). Below: pips value in headlineMedium. Below: trade type chip (BUY/SELL) + date range label. Off-white or cream background for this hero section (16dp padding).
Details Table	Full-width card. Two-column key-value rows: Entry Price | Exit Price | Lot Size | Duration | Open Time | Close Time | RR Ratio | Commission (if added). Warm Border dividers between rows.
Notes Section	Card: 'Trade Notes'. bodyMedium Charcoal text, or italic Slate placeholder 'No notes added'. Edit icon in card header to add/edit inline.
Emotional State	Card: shows selected emoji + label text. If none: 'No emotion logged'.
Tags Section	Row of tag chips below. If none: 'No setup tags'. 'Add tags' ghost link.
Screenshot	If attached: full-width card with image thumbnail (tappable → full screen viewer). If none: dashed border box with 'Add screenshot' upload prompt.
Edit Mode	Tap Edit in app bar: all fields in card become editable in-place. 'Save changes' button appears at bottom (above safe area). 'Cancel' ghost link in app bar left replaces back arrow.

Screen 10 — Journal / Trade Log Screen

Property	Specification
Purpose	Chronological list of all logged trades. Searchable, filterable, sortable.
App Bar	Title: 'Journal' (headlineLarge). Right: Filter icon (funnel icon, toggles filter panel). Search icon opens search bar inline below app bar.
Search Bar	Slides down below app bar when search icon tapped. White bg, Slate placeholder 'Search instrument, notes…', clear button right. Searches instrument name and notes in real time.
Filter Panel	Horizontal chip row (scrollable). Chips: All | BUY | SELL | Profit | Loss | This Week | This Month | [each custom tag]. Chips follow same active/inactive style as Dashboard date range chips.
Sort Options	Small 'Sort: Newest' row below filter chips. Tap to show sort dropdown: Newest First | Oldest First | Highest P&L | Lowest P&L | Best RR.

Property	Specification
Trade List	Full-width scrollable list. Each item: Trade List Card (spec in Section 6.3). 8px gap between cards. Section headers by date (labelSmall, Slate): 'Today', 'Yesterday', 'July 14, 2026', etc.
Swipe Actions	Swipe left on a card: shows red 'Delete' action. Swipe right: shows 'Edit' action (Slate). Tap action area to confirm.
Summary Bar	Sticky bar at top (below filter): shows period summary. 'Showing 42 trades | Net: +$1,240.50 (+186 pips)'. Updates with active filters.
Empty State	Large illustration + 'No trades match your filters.' + 'Clear filters' Ghost link. First-time empty: different message: 'Ready to log your first trade?' + Primary CTA.

Screen 11 — Calendar View Screen

Property	Specification
Purpose	Monthly P&L visualisation. Each day shows colour-coded performance. Tap a day to see that day's trades.
App Bar	Title: 'Calendar' (headlineLarge). Month navigation: left/right arrow chevrons flank the month+year label (headlineMedium). No other app bar items.
Month Summary Row	Below app bar, above calendar: 3 micro-metrics. Left: 'Trading Days: 14'. Centre: 'Win Days: 10 (71%)'. Right: 'Best Day: +$430'. labelSmall labels, bodySmall values. Warm Border dividers between.
Day of Week Headers	Mon–Sun row (or Sun–Sat for users in US locale). labelSmall, Slate, centred in each column.
Calendar Grid	7-col grid of day cells. Each cell: 52dp tall. Day number top-left (labelSmall, Charcoal). P&L value bottom-right or centred (labelSmall, coloured). Cell backgrounds: no trades=Cream; profit=emerald at 20% opacity; loss=crimson at 20% opacity. Today: Slate ring border 1.5px. Selected day: deeper border + subtle shadow.
Month Navigation	Swipe left/right on calendar grid to advance/retreat months. Month header updates. Smooth slide animation.
Day Detail Drawer	Tap a day cell: a mini bottom sheet slides up (40% screen height) showing: date header, total P&L for day, number of trades, list of trade cards for that day (truncated). 'See all [N] trades' link at bottom opens Journal screen filtered to that date.
Days with No Trades	Cream background, day number only. Future days: slightly greyed out, no tap interaction.
Colour Legend	Below calendar: small legend row: Emerald swatch = 'Profit day', Crimson swatch = 'Loss day', Cream swatch = 'No trades'. labelSmall text.

Screen 12 — Analytics / Stats Screen

Property	Specification
Purpose	In-depth performance analysis. Charts and stats that tell a trader how they are performing.
App Bar	Title: 'Analytics' (headlineLarge). Right: date range filter icon (calendar icon) — opens period picker bottom sheet.
Period Filter	Bottom sheet picker: This Week / This Month / Last Month / Last 3 Months / This Year / Custom range. Shows selected period as subtitle below screen title.
Section 1 — Performance Overview	Horizontal scrollable row of metric cards (show 2 at a time): Win Rate % | Profit Factor | Avg Win | Avg Loss | Avg RR Ratio | Total Trades | Total Volume (lots) | Best Trade | Worst Trade. Each card: White bg, Warm Border, 12px radius, 100dp wide × 90dp tall.
Section 2 — Equity Curve	Large full-width chart card. 200dp chart height. Toggles between 'Balance' and 'Cumulative Pips' via segmented control above chart. Cross-hair on drag.
Section 3 — Win/Loss Donut Chart	Two side-by-side cards (or single wide card). Left: Donut chart — Win % vs Loss % in emerald/crimson. Right: Bar chart — trade count by day of week (Mon–Fri).
Section 4 — Trade Frequency	Full-width card. Mini calendar heatmap (github-style): 12 weeks visible, each day square = trade count intensity. Darker = more trades. Shows trading consistency.
Section 5 — P&L by Session	Horizontal bar chart: London | New York | Tokyo | Sydney session P&L. Bars: emerald for positive, crimson for negative.
Loading	All chart cards show skeleton shimmer in matching card shapes. Stagger with 100ms delays.
Empty State	Full page: illustration + 'Not enough data yet. Log at least 5 trades to see analytics.' with trade count progress (e.g., '2 / 5 trades logged').

Screen 13 — Profile Screen

Property	Specification
Access	Tap avatar in Dashboard app bar → pushes profile screen (slides from right).
App Bar	Back arrow. Title: 'Profile'.
Top Card	White card. Centre: avatar (80×80dp circle, photo or initials). Below: display name (headlineMedium). Below: email (bodySmall, Slate). Edit icon top-right of card for profile photo/name change.
Stats Strip	3-column strip below top card: Total Trades | Days Active | Win Rate. These pull from all-time data. Each column: labelSmall label below, headlineSmall value above.
Account Info Card	White card with rows: Account Type (Demo / Real tag chip), Timezone, Preferred Currency. Each row: icon left, label centre, value right. Tappable rows open inline edit or navigate to Settings.
Quick Links	Card with rows: 'Settings →' | 'Change Password →' | 'Export Data →'. Each row: icon left, label, chevron right.
Sign Out	Crimson ghost text button at bottom: 'Sign out'. Tap → confirmation dialog: 'Sign out of PipPal?' with Sign Out (destructive) and Cancel.

Screen 14 — Settings Screen (Main)

Property	Specification
Access	From Profile screen 'Settings →' row, or gear icon in Dashboard app bar.
App Bar	Back arrow. Title: 'Settings'.
Layout	Grouped list sections (iOS-style: white cards with section label above in Slate, labelSmall, uppercase). Each row: icon (24dp) left, label (titleMedium) centre, value or chevron right.
Section: Appearance	Row 1: 'App Theme' → shows 'Light / Dark / System' with current value right. Taps to sub-screen. Row 2: 'Profit Colour' → shows colour swatch right. Taps to colour picker. Row 3: 'Loss Colour' → same. Row 4: 'Accent Colour' — future feature, greyed out (label + 'Coming soon' badge right).
Section: Account	Row: 'Account Type' — toggles Demo / Real. Row: 'Default Currency' → value + chevron. Row: 'Time Zone' → value + chevron.
Section: Data	Row: 'Export Trades (CSV)' → tap to trigger download. Row: 'Cloud Backup' — future, greyed + 'Coming soon'. Row: 'Import Trades' — future.
Section: Notifications	Row: 'Daily Reminder' → toggle switch. Row: 'Reminder Time' → time picker (only active if toggle on). Row: 'Weekly Performance Summary' → toggle.

Property	Specification
Section: Support	Row: 'About PipPal' (version number right). Row: 'Privacy Policy' → opens in-app browser. Row: 'Terms of Service'. Row: 'Rate PipPal' → opens App Store.

Screen 15 — App Theme / Display Settings Sub-Screen

Property	Specification
Access	Settings → Appearance → 'App Theme' row.
Theme Selector	3 large option cards in a vertical stack. Each: icon left (sun / moon / phone screen), label centre, radio button right. Options: 'Light' | 'Dark' | 'System (follows device)'. Selected card: Crimson left border strip + Crimson radio fill.
Colour Customisation	Below theme selector: Section 'P&L Colours'. Two rows: Profit Colour (swatch + label + 'Change' Ghost link) | Loss Colour (same). Tapping 'Change' opens a colour picker bottom sheet with a predefined palette of 8 options (no custom hex — keep it simple). Defaults: Emerald and Crimson.
Preview	At bottom of screen: a live preview mini card showing a sample trade with selected profit/loss colours applied. Updates in real time as user picks colours.
Save	Changes apply immediately (live preview). 'Reset to defaults' Ghost link at bottom.

9. Animations & Transitions

> **DESIGN NOTE** All animations should feel premium but never distracting. The baseline rule: if an animation takes user attention away from data, it is too much. Use animation to guide focus, confirm actions, and reward completion — not to show off.

9.1 Global Transition Timing

Animation Type	Duration	Easing Curve	Usage
Screen push (right to left)	300ms	easeInOutCubic	Navigating to sub-screens (Trade Detail, Settings)
Screen pop (left to right)	280ms	easeInOutCubic	Back navigation
Bottom nav tab switch	200ms	fadeThrough (Material 3)	Switching between Dashboard, Journal, Calendar, Analytics tabs
Bottom sheet slide up	380ms	spring (mass: 0.8, stiffness: 300)	Log Trade sheet, day detail sheet, picker sheets
Bottom sheet dismiss	280ms	easeInCubic	Swipe down or Cancel on bottom sheets
Fade transitions (toasts, overlays)	200ms in / 150ms out	easeOut	Toast notifications, overlay dimmer
Micro-interactions (button press)	80ms scale to 0.97×	easeOut	All tappable elements

9.2 Screen-Specific Animations

- **SPLASH SCREEN: Logo spring pop-in (0→1.05→1.0 scale, 500ms). Wordmark fade-up (300ms, 200ms delay). Full screen fade to off-white before navigating.**
- **DASHBOARD — Equity Curve Chart: On first load, the line draws progressively from left to right (1200ms, easeOut). The fill area below the line fades in simultaneously.**
- **DASHBOARD — Metric Cards: Numbers count up from zero on first load. Stagger: each card enters 80ms after the previous. Use a number-count animation (interpolated from 0 to final value, 800ms).**
- **DASHBOARD — FAB: On scroll down: FAB scales to 0 with 200ms fade. On scroll up: FAB scales back to 1 with spring. On tap: brief scale to 1.15× then spring to 1.0 before sheet opens.**
- **LOG TRADE — Save Success: Sheet slides down. Simultaneously: a Lottie checkmark animation appears in the centre of screen (emerald checkmark, 0.8s). Trade card materialises at top of Journal list with a fade+slide-in.**
- **CALENDAR — Month Transition: Swipe left/right: current month slides out, new month slides in (300ms, spring). Day cells fade in with a 20ms stagger from top-left to bottom-right on month change.**

- **ANALYTICS — Charts: All charts animate on first render. Donut chart: fills from 12 o'clock position clockwise (1000ms). Bar charts: bars grow from baseline up (800ms, staggered). Equity curve: same draw-in as Dashboard version.**
- **ONBOARDING SLIDES: Horizontal spring slide between slides. Each illustration has an entrance scale (0.92→1.0, 300ms) as its slide comes into view.**

9.3 Haptic Feedback Map

Interaction	Haptic Type	Notes
Bottom nav tab tap	Light impact	Every tab switch
Trade saved successfully	Success notification haptic	Paired with Lottie checkmark animation
Trade deleted	Heavy impact	Destructive action confirmation
Swipe to reveal actions on trade card	Light selection haptic	As the action buttons reveal
Error / form validation fail	Error notification haptic	Paired with field red border animation
Calendar month swipe	Light impact	On month change complete
Toggle switch flip	Light selection haptic	Every toggle change in Settings

10. Dark Mode Specifications

Dark mode is designed as a secondary mode (light mode is primary). All screens must be designed in light mode first; dark mode maps are provided below. The designer should produce a Dark Mode variant for the core screens: Dashboard, Journal, Calendar, Analytics, and Trade Detail.

10.1 Dark Mode Colour Token Mapping

Token Name	Light Mode Hex	Dark Mode Hex	Rationale
colorBackground	#F5F1E8	#1E1E1B	Deep warm charcoal — not pure black (harsh)
colorSurface	#FFFFFF	#2D2D2A	Card surface: user's Charcoal colour
colorSurface2	#E5DCC5	#3A3A36	Secondary surface: slightly lighter than card
colorTextPrimary	#2D2D2A	#E5DCC5	Inverts: cream text on dark bg
colorTextSecondary	#4C4C47	#B5AE99	Warm mid-grey text for secondary info
colorTextMuted	#848FA5	#6B7A96	Slightly desaturated Slate for muted text
colorAccent	#848FA5	#A0ADBE	Lighter Slate for better contrast on dark bg
colorBrandCrimson	#C14953	#E5717A	Lightened slightly for dark bg contrast
colorProfit	#2A9D5C	#4DBF7F	Lightened emerald for dark bg readability
colorWarning	#D4854A	#E8A06B	Lightened amber
colorBorder	#E0D9C5	#3D3D39	Dark warm border — subtle, not harsh
colorNavBar	#FFFFFF	#252522	Bottom nav slightly darker than bg

10.2 Dark Mode Design Rules

- NO pure black (#000000) backgrounds — use #1E1E1B (Deep Warm Charcoal) as the darkest background
- Card elevation in dark mode: use BORDERS not shadows (shadows are invisible on dark bg). Card border: 1px solid #3D3D39
- Image and chart contrast: ensure all chart elements have sufficient contrast against dark surfaces (minimum 4.5:1 for text)
- Calendar cells in dark mode: profit cells use emerald at 25% opacity on dark surface; loss cells use crimson at 25% opacity. The number text uses the lighter versions of emerald/crimson
- Status bar: in dark mode, use light content (white icons) on dark background

- The off-white background (#F5F1E8) is the 'warm' design signature — preserve this warmth in dark mode by using #1E1E1B rather than cold dark grays

11. Accessibility Guidelines

11.1 Contrast Requirements

Text Pair	Light Mode Ratio	Dark Mode Ratio	WCAG Standard
Charcoal (#2D2D2A) on Off-White (#F5F1E8)	12.3:1	N/A (dark mode inverted)	AA Pass (4.5:1 required)
Cream text (#E5DCC5) on Charcoal (#1E1E1B) — dark mode	N/A	9.8:1	AA Pass
Crimson (#C14953) on White — buttons	4.8:1	N/A	AA Pass (minimum)
Slate (#848FA5) on Off-White — muted text	3.9:1	N/A	FAILS AA for small text — use for labels only, not primary text
Emerald (#2A9D5C) on White — profit text	4.5:1	N/A	AA Pass (exact minimum)

WARNING Slate (#848FA5) does not meet WCAG AA for body text on light backgrounds. Use only for labelSmall, captions, and helper text — never for primary body copy or critical data labels.

11.2 Touch Target Sizes

- Minimum tap target: 44×44pt on iOS, 48×48dp on Android. Design at 48dp to satisfy both
- The bottom nav bar icons must have 48dp tap areas even if the visual icon is smaller
- Trade list card swipe targets: the delete/edit reveal areas must be minimum 60dp wide
- Calendar day cells are 52dp tall — acceptable minimum (the entire cell is tappable, making the effective target per cell = full cell area)

11.3 Semantic & Screen Reader Rules

- All icons used without a visible label must have a semantic accessibility label (e.g., filter icon → 'Filter trades')
- P&L values must have full context in their accessibility label: not just '+$48.00' but 'Profit: 48 dollars. EUR/USD trade, July 14'
- All interactive elements must have clear focus indicators (Slate ring, 2px, 2px offset)
- Do not rely solely on colour to convey information — always pair colour with an icon or text label (e.g., profit arrow up icon + emerald colour, not emerald alone)
- Form error messages must be announced by screen readers immediately on validation (not just shown visually)

11.4 Text Sizing

- The app must support iOS Dynamic Type and Android font scaling. Design at default scale; test at large (1.3×) and extra-large (1.5×) to ensure layouts do not break
- Never truncate primary financial data values — always allow wrapping or horizontal scroll in extreme type sizes

12. Designer Deliverables Checklist

The following must be delivered by the designer in Figma (or equivalent tool) with exported assets as specified:

12.1 Design System File

- Colour styles: all tokens from Section 3.3 as named Figma colour styles
- Text styles: all type scale levels from Section 4.2 as named Figma text styles
- Spacing tokens: named frame/auto-layout spacing values from Section 5.1
- All components from Section 6 in a dedicated Components page — with all states
- Dark mode: duplicate colour styles with /Dark suffix for each token

12.2 Screen Designs

- All 15 screens defined in Section 8, plus: Forgot Password, Empty States (per screen), Loading/Skeleton State variants
- Each screen at 390×844pt (iPhone 14 base). Additional artboards at 375×667pt and 428×926pt
- Both Light Mode and Dark Mode variants for: Dashboard, Journal, Calendar, Analytics, Trade Detail
- Interactive prototype connections for primary user flows: Onboarding → Dashboard → Log Trade → Trade Detail

12.3 Assets & Export

- All icons used: exported as SVG at 24dp (and 20dp variant)
- App icon: 1024×1024px PNG, plus all iOS and Android required sizes
- Splash screen asset: exported at 1×, 2×, 3× for both iOS and Android
- Onboarding illustrations: SVG (scalable) format
- Empty state illustrations: SVG format
- Loading skeleton examples: as Figma prototypes or annotated reference frames

12.4 Documentation in Figma

- Annotations on every screen: spacing values, interaction notes, state descriptions
- Transition and animation notes on the prototype connections (timing, easing, haptics)
- Dark mode: colour swap notes showing Light → Dark token changes
- Handoff-ready: all elements using named styles (no raw hex values in Figma except in the Style Library)
